

**North American 2200m QSO Stations**  
 Please send corrections and additions to 2200m@n1bug.com  
 Last updated 12 November 2019

Notes:

1. km/W may be based on reported EIRP at the time of a QSO. EIRP can vary as a result of station upgrades/downgrades and environmental factors. Also, best DX may not reflect the same QSO which resulted in best km/W. Thus km/W may not always be a product of listed (usually maximum or current) EIRP and Best DX columns.

2. Date may be date of last data update or date of last known QSO activity, whichever is more recent.

ON4KST Chat is a watering hole for discussion of 2200m operating and making skeds for QSO attempts:
